Trenton, NJ 08625-0420

APPLICATION PACKAGE

for the

Dry Cleaner Equipment Replacement

Reimbursement Grant Program

Dry Cleaner Equipment Replacement Reimbursement Program

Purpose

To address the health risk potential for sensitive receptors for emissions from the perchloroethylene dry cleaning industry, and to encourage a transition to less toxic dry cleaning chemicals and processes.

Background

In 2005 the Department proposed rules to regulate, and eventually eliminate, the use of perchloroethylene in the dry cleaning industry. As a result of public comments, including the financial burden of the proposed rules, the Department decided to re-propose the rules with compliance deadlines that would reduce the financial burden. In addition, as a result of an enforcement settlement, the Department is receiving over \$4,000,000 to be used in a Supplemental Environmental Project (SEP). All parties involved in the settlement have agreed to use the SEP funds to reduce the health risk impact of the perchloroethylene dry cleaning industry. This grant program will use the SEP funds to encourage the removal of older perchloroethylene dry cleaning systems, especially those with the greatest impact on sensitive receptors such as those that are co-residential and co-located with day care centers.

Reimbursement Program

This Reimbursement Program will identify the mechanism and qualifications for receiving a reimbursement grant, and the amount of that grant.

Qualifying systems

The removal of a perchloroethylene dry cleaning system, and replacing that system with a non-perchloroethylene (hydrocarbon or professional wet cleaning) system either at the current business location, or at a new business location. The owner/operator must remain the same.

The removal of a third generation perchloroethylene dry cleaning system, and replacing that system with a fourth generation perchloroethylene system or any non-perchloroethylene (hydrocarbon or professional wet cleaning) system either at the current business location, or at a new business location. The owner/operator must remain the same.

Removal of a fourth generation perchloroethylene dry cleaning system from a facility that is co-residential without installation of any new equipment.

Amount of Reimbursement

The amount of the reimbursement grant will be as determined in Attachment 1. The amount is based on the type of system, the capacity of the system in pounds of clothing cleaned per load, and by the age of the equipment at the time it is removed.

For removal of a perchloroethylene dry cleaning system from a facility that is co-residential without installation of any new equipment, the reimbursement grant will be at 75 % of the amount in Attachment 1 for removal of a fourth generation system.

If the replacement non-perchloroethylene system utilizes a water based technology, also known as professional wet cleaning, the amount of the grant will be increased by up to \$15,000. The applicant can install both a water based and non-water based system to qualify for the additional \$15,000.

Eligibility

To be eligible for a reimbursement grant, the dry cleaning facility must complete the attached application. Once reviewed and eligibility is confirmed by the Department, the facility and the Department must execute a contract detailing all of the requirements for the reimbursement grant. A copy of contract template can be found on the Department's web site at:

<http://www.nj.gov/dep/enforcement/drycleanergrant.html>

The Department must verify that the equipment to be removed meets the qualifications for this reimbursement grant. The Department must also verify that the equipment installed meets the requirements for the reimbursement grant.

Once the requirements for the reimbursement grant, including removal and installation of qualifying equipment, have been completed, the Department will issue a payment for the approved reimbursement grant amount.

Procedure

To participate in this program, the applicant must complete the below application form and submit the application form to:

NJ Department of Environmental Protection
MSCI Air Compliance & Enforcement
Mail Code 22-03A
PO Box 420
Trenton, NJ 08625-0420

The Department will review the application and will notify the applicant if the application qualifies. If the application does not qualify, the Department will return the application with the reason.

Once the Department determines the application qualifies for this program, the applicant and the Department must execute a contract, as specified above.

Additional details are available at the above web site, or by contacting the Department at (609) 292-3133.

Attachment 1

For perchloroethylene dry cleaning system removed in 2010

| Type of Machine | | Size of Machine Capacity (Lbs per load) | | | | |

Definitions

The following words and terms, when used in this application, have the following meanings:

“CEHA agency” means a county agency delegated authority under the County Environmental Health Act to act on behalf of the New Jersey Department of Environmental Protection.

“Child care center” shall have the same meaning as the definition of the term in the Department of Human Services’ Manual of Requirements for Child Care Centers, N.J.A.C. 10:122-1.2, Definition of child care center.

“Closed-loop machine” means dry cleaning equipment in which washing, extraction, and drying are all performed in the same single unit (also known as dry-to-dry) and that recirculates the perchloroethylene laden vapor through a control system with no exhaust to the atmosphere during the drying cycle.

“Co-located” means not located in a stand alone building, but sharing an area of a single building or structure with other tenants or occupants (residential or commercial entities) that are not part of the dry cleaning facility or the services offered by the dry cleaning facility.

“Company official” means an owner, president, treasurer, or vice-president of the dry cleaning facility, who is in charge of a principal business function.

“Dry cleaning facility” means a facility with one or more dry cleaning systems that are located on one or more contiguous properties within the State of New Jersey, in actual physical contact or separated solely by a public roadway, or other public right-of-way, and are owned or operated by the same person (or by persons under common control). The facility encompasses all services and/or products made available to the facility’s customers including, but not limited to, dry cleaning, tailoring, shoe repair, laundry, rug cleaning, drapery cleaning, new drapery sales, smoke and fire damage restoration, tuxedo rental, lint rollers, and replacement buttons.

“Dry cleaning system” means any equipment, machine, device, or apparatus used to dry clean materials. Dry cleaning system may include, but is not limited to, a transfer machine, vented machine, converted machine, closed-loop machine, reclaimer, or drying cabinet. Dry cleaning system includes the following equipment, devices, or apparatus associated with the dry cleaning process: filter or purification systems; waste holding, treatment, or disposal systems; cleaning solvent supply systems; dip tanks; pumps; gaskets; piping, ducting, fittings, valves, or flanges that convey contaminated air; and control systems.

“Fourth generation dry cleaning system” means a dry cleaning system using a closed-loop machine with a primary control system and a secondary control system.

“Perchloroethylene dry cleaning” or “perchloroethylene dry cleaning system” means a dry cleaning system that uses perchloroethylene in the process to remove soil, grease, paint, and other unwanted substances from materials; or a process to remove residual perchloroethylene from previously cleaned materials.

“Primary control system” means a refrigerated condenser, or an equivalent closed-loop vapor recovery system.

“Professional Wet Cleaning System” means a system which uses computer-controlled washers and dryers to minimize agitation and heat, which can damage garments; which use non-toxic, biodegradable detergents, specially designed for professional wet cleaning that are approved for disposal into the sewer system; and includes finishing equipment to help maintain the proper shape and size of the cleaned garments.

“Refrigerated condenser” means a closed-loop vapor recovery system into which perchloroethylene vapors are introduced and then trapped by cooling below the dew point of the perchloroethylene.

“Residence” means any dwelling or housing in which people reside, excluding short-term housing that is occupied by the same person for a period of less than 180 days (such as a hotel room).

“Secondary control system” means a device or apparatus that reduces the concentration of perchloroethylene in the recirculating air at the end of the drying cycle, beyond the level achievable with a refrigerated condenser alone, and is designed to reduce the perchloroethylene concentration below 500 ppm.

“Stand alone building” means an architecturally independent building structure, not in use by or designed for ownership, rental or lease by multiple, independently owned and/or operated tenants.

“Third generation dry cleaning system” means a dry cleaning system using a closed-loop machine with a primary control system.

"Professional wet cleaning system" means a system which uses computer-controlled washers and dryers to minimize agitation and heat, which can damage garments; which use non-toxic, biodegradable detergents, specially designed for professional wet cleaning that are approved for disposal into the sewer system; and includes finishing equipment to help maintain the proper shape and size of the cleaned garments.

To qualify for this program, the equipment to be removed or installed must meet the following requirements.

- A. The equipment to be removed must be:
1. A perchloroethylene dry cleaning system;
 2.
 - i. A third generation dry cleaning system;
 - ii A fourth generation dry cleaning system within 50 feet of a child care center; or
 - iii A fourth generation dry cleaning system co-located with a residence; and
 3.
 - i If the equipment is a third generation dry cleaning system, it must have been originally installed after January 1, 1995 and before December 27, 2005
 - ii. If the equipment is a fourth generation dry cleaning system, it must have been originally installed after January 1, 1995

The equipment to be installed must be:

1. A fourth generation dry cleaning system;
2. A dry cleaning system which does not utilize perchloroethylene; or
3. A professional wet cleaning system

The above equipment to be removed, and equipment to be installed, will be known as “qualifying equipment.”

For A.2.ii or iii above (within 50 feet of a child care center or co-located with a residence), the equipment to be installed must be either a dry cleaning system which does not utilize perchloroethylene or a professional wet cleaning system.

- B. Reimbursements may be granted only for the following:
1. Removal and installation of qualifying equipment at the same location.
 2. Removal and installation of qualifying equipment at different locations by the same owner.
 3. Removal of qualifying equipment at a facility that is co-located with a residence.
 4. Installation of a professional wet cleaning system.
- C. The applicant or owner/operator of the dry cleaning facility must not owe the Department, or delegated CEHA agency, any air pollution penalties or fees.

The amount of the reimbursement will be determined as follows:

The attached table (Attachment 1), based on equipment type, capacity (lbs. per load), installation date, and year of equipment removal, will be used to calculate the reimbursement for B.1, 2, and 3 above. The amount for B.3 will be at 75 % of the amount in Attachment 1

The reimbursement for B.4 above will be up to \$15,000, but no more than the actual purchase and installation cost, and will be in addition to the reimbursement for B.1, 2, or 3 above, if applicable.
